Saison Information Systems Co., Ltd.

HULFT China Receives Shanghai City's "Star Software Provider" Award

DataSpider Servista's efficient system integration highly rated.

Saison Information Systems Co., Ltd. (Headquarters: Tokyo, Japan; CEO: Kazuhiro Uchida; Herein: Saison Information Systems) makes middleware products including HULFT (managed file transfer, MFT) and DataSpider Servista (enterprise application integration, EAI).

Its fully-owned Chinese subsidiary, HULFT China Co., Ltd. (Headquarters: Shanghai, China; CEO: Kazuhiro Uchida; Herein: HULFT China) participated in the Shanghai Municipal Software Association (SSIA) event held on April 12, 2017. DataSpider Servista's (1) efficient system integration capabilities were recognized by the "Star Software Provider" Award.

HULFT China, with offices in Shanghai and Beijing, it offers versions of its middleware products that have been fully localized to meet the unique needs of the Chinese market; HaiDu (MFT) and HaiDu Data Spider (EAI), along with related systems integration services.

At the event, HULFT China's software sales and IT services offerings were recognized for optimizing the integration of both systems and the external parties they link to.

Reasons for the Award

1. Software Sales / IT Service Provision

HULFT China will provide HaiDu Data Spider and at the same time support customers in maximizing the ROI and efficiency gained through systems integration. This is expected to contribute to the realization of the Shanghai municipal government's 2017 revenue target for the software industry (130 billion RMB) and the Chinese national government's 13th five-year plan income goal (1 trillion RMB) (2).

2. China's Nursing Care Market

In China, where population of people aged sixty and over has exceeded 200 million (3), the market for nursing home care facilities has expanded and its uptake of IT is also progressing. Against this backdrop, HULFT China's comprehensive "Smart Aged Care Solutions," including HaiDu Data Spider, have been well received.

By using HaiDu Data Spider, it is possible to easily and seamlessly integrate and connect disparate nursing care and welfare systems such as care management, health monitoring, nutrition management, CRM, biosensors, and location tracking. This removes the need to undertake custom software development to link them. As a result, the convenience of both nursing home residents and working staff were evaluated as having greatly improved.

About DataSpider Servista

As of March 2017, DataSpider Servista has been installed by over 3,000 companies. In Japan, it has been ranked No. 1 in customer satisfaction for four years running*. Its GUI enables quick and easy setup without the need for coding. Its many adapters can connect a wide variety of systems, applications, databases, and other data sources hosted either on-premise or in the cloud. It can be used to automate a broad range of processes, thereby greatly improving an organization's operational efficiency.
